Part IV What is CM Fortran?

Chapter 2 A Language for Array Processing 3

1.1 Array Operations in CM Fortran 3
1.1.1 Compared with Fortran 77 4
1.1.2 Example in Fortran 77 and CM Fortran 4

1.2 Data Parallel Processing 6
1.2.1 Compared with Serial Processing 6
1.2.2 The Compiler's Machine Model 6
1.2.3 Data Parallel Processing on the CM System 9
1.2.4 CM Fortran as a Superset of Fortran 77 11

1.3 The Features of CM Fortran 12
1.3.1 Fortran 90 Array Processing 12
1.3.2 Other Array Extensions 12
1.3.3 Precision Control 13
1.3.4 Other Fortran 90 Features 13
1.3.5 CM Fortran Libraries 14
1.3.6 CM System Libraries 15

Chapter 3 Hello Parallel World 17

2.1 A Simple Program 18

2.2 Declaring and Initializing Arrays 19

2.3 Array Operations 20
2.3.1 Conformable Arrays 20
2.3.2 Scalar Extension 22
2.3.3 Array Homes 22

Copyright © 1989–1994 Thinking Machines Corporation

2.4 Retrieving CM Data 25
2.5 Compiling and Executing 26
2.5.1 Specifying Execution Model 27
2.5.2 The CM-5 Compilation Process 27
2.5.3 Incorporating Existing Routines 27

Chapter 4 Execution Models 29

3.1 Global Data Parallel Models 30
3.1.1 CM-5 Global SPARC Nodes Model 31
3.1.2 CM-5 Global Vector-Units Model 32
3.2 Node-Level Message-Passing Models 34
3.2.1 CM-5 Nodal Model (Hostless) 34
3.2.2 Fortran 77 on a Node (Hostless) 35
3.2.3 CM-5 Nodal Model (Host/Node) 37
3.3 The Global/Local Model 39
3.4 CM Fortran Simulator 41

Part V Programming in CM Fortran

Chapter 5 Array Declarations and Initial Values 45

4.1 Declaring Arrays 46
4.1.1 Using the **DIMENSION** Attribute 46
4.1.2 Array Properties 46
4.1.3 Object Types and Kinds 47
4.2 Working with Constants 48
4.2.1 Defining Named Constants 48
4.2.2 Specifying Typed Constants 49
4.3 Setting Array Values 50
4.3.1 Assignment 50
4.3.2 **CMF_RANDOM** Subroutine 51
4.3.3 **DATA** Statement 52
4.3.4 Array Constructors 53
4.3.5 **DATA** Attribute 54
4.4 A Note on Common Arrays 55

Version 2.2, October 1994
Copyright © 1989–1994 Thinking Machines Corporation

Chapter 6 Selecting Array Elements 57

5.1 Conditional Operations 57
5.1.1 The **WHERE** Statement 58
5.1.2 The **WHERE** Construct 59
5.1.3 Nested **WHERE** Constructs 60
5.1.4 Conditional Intrinsic Functions 62
5.1.5 Front-End Conditionals 63

5.2 Array Sections 65
5.2.1 Triplet Examples 65
Negative Strides 65
Multidimensional Parent Arrays 66
Triplets and Scalar Subscripts 67
Default Triplet Forms 67
5.2.2 Using Array Sections 68
Conformable Sections 68
Sections and Communication 68

Chapter 7 Subprograms 71

6.1 Array Objects as Arguments 72
6.1.1 Semantics of CM Array Arguments 72
6.1.2 Homes of Array Arguments 74
Mismatched Homes 74
Avoiding Mismatched Homes 75
Verifying Array Homes 76
6.1.3 Types and Shapes of Array Arguments 77
Reshaping Arrays 77
“Hidden” Array Arguments 78
Array Arguments with Elided Axes 78
6.1.4 Layouts of Array Arguments 79
6.1.5 Avoiding Argument-Passing Errors 79

6.2 Declaring Dummy Array Arguments 81
6.2.1 Explicit-Shape Dummies 81
6.2.2 Assumed-Shape Dummies 81
6.2.3 Assumed-Size Dummies 82
6.2.4 Assumed-Layout Dummies 83

6.3 Making Subroutine Interfaces Explicit 85

Copyright © 1989–1994 Thinking Machines Corporation

6.4 Array Sections as Arguments 88
6.4.1 Passing Array Sections 88
6.4.2 Passing Noncanonical Array Sections 89
6.4.3 Passing Contiguous Array Sections 91
6.4.4 The **INTENT** Attribute 92
6.4.5 Example of **INTENT** 92
6.5 User-Defined Functions 95
6.5.1 Statement Functions 95
6.5.2 Scalar-Valued Functions 95
6.5.3 Array-Valued Functions 95
6.6 Declaring Automatic Arrays 98
6.7 Retrieving Array Properties 100
6.7.1 Array Shape 100
6.7.2 Array Size 100
6.7.3 Dimension Bounds 101
6.7.4 Inquiry Example 102
6.8 Common Arrays 103
6.8.1 Common Array Homes 103
6.8.2 Declaring Common Arrays 104
Character Type and **LAYOUT** Directive 104
COMMON Directive 104
Compiler Switches 105
6.8.3 Initializing Common Arrays 105

Chapter 8 Dynamic Array Allocation 107

7.1 Array Pointers 108
7.1.1 Declaring Array Pointers 108
7.1.2 Allocating Pointer “Target” Arrays 109
7.1.3 Using Array Pointers 110
7.2 Allocatable Arrays 112
7.2.1 Compared with Pointers 113
7.3 Utility Library Procedures 113
7.4 Front-End Arrays and Scalars 116

Chapter 9 Data Movement 117

8.1 Array Sections 118
8.1.1 Dimensional Shifts 118
8.1.2 Shifting Noncontiguous Sections 120
8.1.3 Permutations 121

Version 2.2, October 1994
Copyright © 1989–1994 Thinking Machines Corporation

8.2 Vector-Valued Subscripts 121
8.2.1 Examples 122
8.2.2 Permutations 124
8.2.3 Assigning Permuted Sections 124
8.2.4 Replicating Data 125
8.3 Intrinsic Shift Functions 126
8.3.1 Using **CSHIFT** 126
8.3.2 Using **EOSHIFT** 128
8.3.3 Efficiency Note 128
8.4 The **TRANSPOSE** Function 128

Chapter 10 Array Transformations 131

9.1 Array Reduction 132
9.1.1 The **ARRAY** Argument 132
9.1.2 The **MASK** Argument 133
9.1.3 Logical Arrays 134
9.2 Element Location 135
9.2.1 Numeric Arrays 135
Special Cases 136
No **DIM** Argument 136
MASK Argument 136
9.2.2 Logical Arrays 137
DIM Argument 138
9.2.3 Element Location Example 138
9.3 Array Construction 139
9.3.1 Reshaping an Array 140
The Target Array 140
Padding the Target Array 141
Permuting the Axes 141
9.3.2 Merging Arrays 142
9.3.3 Spreading an Array 143
9.4 Array Multiplication 144

Chapter 11 The FORALL Statement 147

10.1 Syntax 148
10.1.1 The **FORALL** Assignment 149
The Target Elements 149
The Source Values 150

Copyright © 1989–1994 Thinking Machines Corporation

10.1.2 The **FORALL** Mask 153
Order of Execution 153
Array-Valued Masks 154
10.2 Execution Model 154
10.2.1 As If Simultaneous 154
10.2.2 Serial versus Parallel 156
Determined by Array Home 156
Determined by Kind of Expression 157
Determined by Temporary Restrictions 157
10.3 Data Motion 158
10.3.1 Compared with Other Features 158
Grid Communications 158
General Communications 159
Global Communication 160
10.3.2 Operations on Irregular Data 161
10.3.3 Parallel Prefix Operations 163
Simple Scans 164
Segmented Scan 165
Scan of Scan 165
Comparison with Utility Procedure **CMF_SCAN_** 165
10.3.4 Send-with-Combiner Operations 168

Chapter 12 Some Simple Programs 171

11.1 Histogram 172
11.1.1 Histogram: Fortran 77 Version 172
11.1.2 Histogram: CM Fortran Version 173
11.2 Convolution 174
11.2.1 Convolution: Fortran 77 Version 174
11.2.2 Convolution: CM Fortran Version 176
11.3 Prime Number Sieve 177
11.3.1 Primes: Fortran 77 Version 177
11.3.2 Primes: First CM Fortran Version 178
11.3.3 Primes: Second CM Fortran Version 179
11.4 Laplace Solver 181

Version 2.2, October 1994

Part VI Advanced Topics

Chapter 13 CM Array Layout 185

12.1 The Canonical Layout 186
12.1.1 Physical Grids 186
12.1.2 Garbage Elements 186
12.1.3 Subgrids 189
12.1.4 Axis Sequence 191
12.1.5 Subgrid Sequence 192
12.1.6 Putting It All Together 192

12.2 Layout without Vector Units 194
12.2.1 CM-5 SPARC Nodes Model 194

12.3 Controlling Array Layout: Axis Ordering and Weights 196
12.3.1 Syntax 196
Note on **:SEND** Ordering 197
12.3.2 Serial Axes 197
12.3.3 Weighting Axes 199

12.4 Performance Issues 200
12.4.1 Effect of Subgrid Length and Physical Grid 200
12.4.2 Effect of Serial Axes 201
12.4.3 Effect of Garbage Elements 202

12.5 Querying an Array's Layout 203

12.6 Specifying Detailed Array Layouts 204
12.6.1 Syntax 204
12.6.2 Processor Masks 205
12.6.3 Examples of Detailed Layout Directives 208
12.6.4 Restrictions on Array Size with Padding Enabled 208

12.7 A Note on **ALIGN** 210
12.7.1 Syntax 210
12.7.2 Caveats on **ALIGN** 211

Chapter 14 Global/Local Programming 213

13.1 Flow of Control 216

13.2 Global/Local Data 217

13.3 Arrays 217
13.3.1 Parallel Arrays 217
13.3.2 Serial Arrays 219

13.4 Restrictions 221

Copyright © 1989–1994 Thinking Machines Corporation

13.5 Performance 221
13.6 Global/Local Library Routines 222
CMGL_BROADCAST_SERIAL_ARRAY 223
CMGL_local_to_global 225
CMGL_global_to_local 229
CMGL_global_to_physical 231
13.7 Program Construction 236
13.7.1 How to Write the CM Fortran Global Program 236
13.7.2 How to Call a Local Routine 237
13.7.3 How to Write a Local Routine in CM Fortran 237
Declaration 237
Arguments 237
Features 238
13.7.4 How to Write a Local Routine in C 239
Declarations 239
Arguments 239
Features 240
13.7.5 The Prototype File 241
Prototypes 241
Data Types 242
Use 242
13.7.6 Compiling and Linking 242
Header Files 243
13.7.7 Debugging 244
13.7.8 Profiling 245
