About This Manual vii
Customer Support ix

Chapter 1 Introduction 1

1.1 Introducing the CM-5 Supercomputer 1
1.1.1 The User's View of the System 2
1.1.2 Gaining Access 3
1.1.3 Executing Programs 4
1.1.4 Checking System Status 5
1.2 CM Fortran and Other CM-5 Software 6
1.3 CM Fortran and System Terminology 6

Chapter 2 Compiling and Linking CM Fortran Programs 7

2.1 The Compiler Command 7
2.1.1 Filename Extensions 8
2.1.2 Linking with CM Libraries 9
2.1.3 Compiler and Linker Output 11
2.1.4 Command Line Arguments 13
2.1.5 Sun Microsystems' Libraries 13
2.1.6 Custom Link Libraries 14
2.2 Some Important Switches 15
2.2.1 Specifying Execution Environment 15
2.2.2 Listing Array Homes 17
2.2.3 Identifying Communication Routines Generated 18
2.2.4 Locating Line Labels and Names 20
2.2.5 Run-Time Safety Checking 21
2.2.6 Debugging 22
2.2.7 Performance Analysis 23
2.2.8 Controlling Axis Sequence 23
2.2.9 Controlling Vector-Length Padding (CM-5 with VUs only) . . 24
2.2.10 Optimization 26
2.3 Compiler Switches 28

Chapter 3 Execution Models **37**

3.1 Global Data Parallel Models 38
3.1.1 CM-5 SPARC Nodes Model 38
3.1.2 CM-5 Vector-Units Model 38

3.2 Node-Level Message-Passing Models 39
3.2.1 CM-5 Nodal Model (Hostless) 39
3.2.2 CM-5 Nodal Model (Host/Node) 39

3.3 The Global/Local Model 40

3.4 CM Fortran Simulator 43

Chapter 4 Program Development Tools **45**

4.1 The Timing Facility 46

4.2 Profiling CM Fortran Programs 49

4.3 Collecting Performance Data 49

4.4 The Traceback Facility 51

4.5 The C Language Preprocessor 53
4.5.1 Used with `-D` 53
4.5.2 Predefined Symbols 54

4.6 The CM Fortran Simulator 56
4.6.1 Timer Accuracy 56
4.6.2 Memory Limitations 57
4.6.3 How the Simulator Works 58

4.7 CM-5 Error Output and Debugging 58

Chapter 5 CM Fortran I/O **59**

5.1 File Systems 60
5.1.1 Specifying a Target File 60

5.2 I/O Streams and Files 62
5.2.1 Associating I/O Units with I/O Streams and Files 62
5.2.2 Default Association of Unit Numbers and Filenames 63
5.2.3 Redirection of Standard I/O Streams 63
5.2.4 Printing the First Character in Output Streams 64

5.3 When is I/O Parallel? 65

5.4 I/O via the Utility Library Procedures 65

5.5 Implementation Notes 66
5.5.1 **`PHYSICAL`** Keyword for **`OPEN`** 66
5.5.2 CM Fortran Records 67

Version 2.2, October 1994

5.6 Hardware Platforms and Execution Models 68
Restrictions on the CM-5 68
Restrictions on the CM Simulator 69
5.7 Example 69

Chapter 6 Language Interoperability 71

6.1 Calling F77 from CM Fortran 71
6.1.1 Linking with `f77` Object Files 71
6.2 Calling C from CM Fortran 71
6.3 Calling C* from CM Fortran 74
6.4 Calling CM Fortran from F77 and C 75

Chapter 7 Notes on the Implementation 77

7.1 CM Numbers 77
7.1.1 Floating-Point Representation 77
7.1.2 Arithmetic Exceptions 77
7.2 Long-Term Restrictions 78
7.2.1 Array Argument Home 78
7.2.2 Array Argument Shape 79
