Index

Symbols

***** unit control specifier, 62
_ (underscore), in references to C procedures, 72, 73

A

.a filename extension, 8
architecture. *See* CM-5 system architecture
as Sun assembler, 7
axis sequence, controlling, 23
-axisreorder, compiler switch, 23, 30

B

BACKSPACE statement, applied to standard I/O stream, 63

C

C
  calling CM Fortran from, 75
  calling CM Fortran subprograms from, 75
-c, compiler switch, 28
.c filename extension, 8
C language, calling from CM Fortran, 71
C preprocessor, 53
C* language, calling from CM Fortran, 74
CM File System, 60
CM Fortran simulator. *See* simulator
CM-5 system architecture, 1
  computational processors, 1
  control processors, 2
  partition managers, 2
  spacesharing, 2
  timesharing, 2
-cm5, compiler switch, 30
-cmdebug, compiler switch, 22, 23, 30
  effect on traceback output, 51
cmf command. *See* compiling CM Fortran programs
CMF_AUTO_PE_FILES environment variable, 12
CMF_DEFAULT_MACHINE environment variable, 17
CMF_defs.h header file, 9
CMF_INIT utility, 75
CMF_params.h header file, 9
CMF_platform_DEFAULT_MODE environment variable, 17
cmf77 library, 9, 13, 47
CMFS, 60
CMFS_PATHTYPE environment variable, 60
cmld linker, 7, 11
cmmd-ld linker, 7
CMOST operating system, 2
-cmprofile, compiler switch, 23, 31
CMPROFILING environment variable, 49
cmps, CMOST command, 5
-cmsim, compiler switch, 30
CMSIM_HEAP_SIZE environment variable, 57
CMSIM_STACK_SIZE environment variable, 57
command-line arguments, example, 13
-common_initialized, compiler switch, 31
communication routines, listing of, 18
-comphost, compiler switch, 31
compiler switches, 28
compiling CM Fortran programs
  cmf command, 7
    command-line arguments, 13
    file extensions accepted, 8

Copyright © 1991–1994 Thinking Machines Corporation

intermediate files generated, 11
linking with CM libraries, 9
switches, 28
syntax, 7
for CM execution models, 15
for debugging, 22
for performance analysis, 23
for run-time safety, 21
-continuations, compiler switch, 31
copy propagation, 27
cpp C language preprocessor, 7, 53
-cross_reference, compiler switch, 20, 31
.cs filename extension, 8
custom link libraries, 14

D

-D, compiler switch, 28
-d_lines, compiler switch, 32
DataVault, 59
specifying a file, 61
dead-code elimination, 26
debugging, 22, 58
direct access files, 67
-directive, compiler switch, 32
-double_precision, compiler switch, 32
.dp filename extension, 8
dpas assembler, 7
-dryrun, compiler switch, 28

E

examples
command-line arguments, 13
I/O, 69
executing programs, 3, 4
execution models, 16
compiling for, 38, 39, 40, 42, 43
defaults, 16
defined, 37
global, 37, 38
CM-5 SPARC nodes, 38
CM-5 vector-units, 38
global/local, 37, 40
hardware requirements, 15
nodal, 37, 39
CM-5 nodal (hostless), 39
CM-5 nodal (host/node), 39
not object-code compatible, 16, 38
simulator, 37, 43
-extend_source, compiler switch, 32
extensions, filename, 8

F

.F filename extension, 8
.f filename extension, 8
F77, calling CM Fortran from, 75
F77 language, calling from CM Fortran, 71
F77 library, contents, 9
-f90syntax, compiler switch, 32
.FCM filename extension, 8, 53
.fcm filename extension, 8
-fecommon, compiler switch, 32
file systems, 60
filename extensions, 8
floating-point exceptions, 77
floating-point representation, 77
Fortran, calling CM Fortran subprograms from, 75

G

-g, compiler switch, 22, 28
effect on traceback output, 51
GETARG library procedure, 13
global execution model, 37, 38
CM-5 SPARC nodes, 38
CM-5 vector-units, 38
global/local execution model, 37, 40
global/local library, 9

H

-h, compiler switch, 28
hardware platforms, 16
homes
listing of, 17
restrictions on arrays, 78
-host, compiler switch, 33

I

-I, compiler switch, 28
I/O, 59
  example, 69
  execution models, 68
  parallel, 59
  parallel, conditions for, 65
  restrictions on the CM-5, 68
  restrictions on the simulator, 69
  serial, 59
  specifying a target file, 60
  streams, redirection, 63
  to DataVault, 61
  to SDA, 61
  units, 62
  utility library procedures, 59, 65
  via sockets and devices, 59
IARGC library procedure, 13
#ifdef C preprocessor command, 74
-implicit_none, compiler switch, 33
INCLUDE files, 11

L

-L, compiler switch, 29
-l, compiler switch, 29
libcmf77.a library, 13
  linking with, 9
libF77.a library, linking with, 9
libraries, CM, 10
  linking with, 9, 10
libraries, CM Fortran, 9
line labels, listing of, 20
link libraries, custom, 14
linking
  with CM libraries, 9, 10
  with Sun Microsystems' libraries, 13
-list, compiler switch, 17, 18, 33
-local, compiler switch, 33

N

names and symbols, listing of, 20
-noaxisreorder, compiler switch. *See* **-axisreorder**, compiler switch
nodal execution model, 37, 39
  CM-5 nodal (hostless), 39
  CM-5 nodal (host/node), 39
-node, compiler switch, 33
-nopadding, compiler switch. *See* **-padding**, compiler switch

O

-O, compiler switch, 26, 29
-o, compiler switch, 29
.o filename extension, 8

P

-padding, compiler switch, 24, 34
padding, controlling, 24
parallel I/O, conditions for, 65
partition managers, 2
.pe intermediate files, 11
performance analysis, 23, 49
-pg, compiler switch, 29
PHYSICAL keyword for **OPEN**, 66
Prism, 22, 45, 49, 58
profiling, CM Fortran programs, 49
.proto filename extension, 8

Q

-q, compiler switch, 29

R

READ statement, 59
records, 67
restrictions, long-term, 78
REWIND statement, applied to standard I/O stream, 63

S

-S, compiler switch, 30
.s filename extension, 8
-safety, compiler switch, 21, 34
safety, run-time, 21
