Depth of Field

Frédo Durand

Add date: Friday

Frédo Durand — MIT Computer Science and Artificial Intelligence Laboratory - fredo@mit.edu

Depth of field

- We allow for some tolerance

Frédo Durand — MIT Computer Science and Artificial Intelligence Laboratory - fredo@mit.edu

Depth of field

- What happens when we close the aperture by two stop?
 - Aperture diameter is divided by two
 - Depth of field is doubled

Frédo Durand — MIT Computer Science and Artificial Intelligence Laboratory - fredo@mit.edu

Depth of field depends on focusing distance

- What happens when we divide focusing distance by two?
 - Similar triangles => divided by two as well

Frédo Durand — MIT Computer Science and Artificial Intelligence Laboratory - fredo@mit.edu

DoF summary 1

- Half aperture, Double DoF
- Double distance, double DoF
- Focal length?

Frédo Durand — MIT Computer Science and Artificial Intelligence Laboratory - fredo@mit.edu

CSAIL **Depth of field & focal length**

- Recall that to get the same image size, we can double the focal length and the distance
- Recall what happens to physical aperture size when we double the focal length for the same f number?
 - It is doubled

24mm 50mm

Fred Durand — MIT Computer Science and Artificial Intelligence Laboratory - fred@mit.edu

CSAIL **Depth of field & focal length**

- Same image size, same f number
- DoF in object space?
 - The same!

Wide-angle lens

Telephoto lens ($2x f$), same aperture

Fred Durand — MIT Computer Science and Artificial Intelligence Laboratory - fred@mit.edu

CSAIL **Important conclusion**

- For a given image size and a given f number, the depth of field (in object space) is the same.
- Might be counter intuitive.
- Now what happens to the background blur?

Fred Durand — MIT Computer Science and Artificial Intelligence Laboratory - fred@mit.edu

CSAIL **Background blur for distant object**

- Same object-space blur
- But more magnified with telephoto
 - => more blurry

Wide-angle lens

Telephoto lens ($2x f$), same aperture

Fred Durand — MIT Computer Science and Artificial Intelligence Laboratory - fred@mit.edu

Pattern enlarged 4 times: it is "smoother", looks more blurry

Fred Durand — MIT Computer Science and Artificial Intelligence Laboratory - fred@mit.edu

CSAIL **Important conclusion**

- For a given image size and a given f number, the depth of field (in object space) is the same.
 - That is, the depth of acceptable sharpness is the same
- But the background looks more blurry with telephoto
 - Because it gets magnified
- Notice that magnification is
 - 1 around the object (because we change the distance)
 - 2 at infinity
- Assignment: Guess the function!

Fred Durand — MIT Computer Science and Artificial Intelligence Laboratory - fred@mit.edu

Seeing beyond occlusion

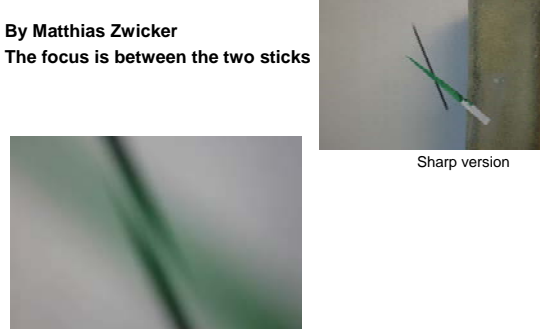

- Photo taken through zoo bars
- Telephoto at full aperture
- The bars are so blurry that they are invisible

Fred Durand — MIT Computer Science and Artificial Intelligence Laboratory - fred@mit.edu

Crazy DoF images

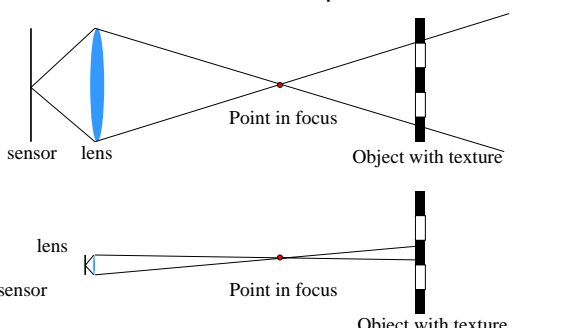

- By Matthias Zwicker
- The focus is between the two sticks

Fred Durand — MIT Computer Science and Artificial Intelligence Laboratory - fred@mit.edu

Depth of field

- It's all about the size of the lens aperture

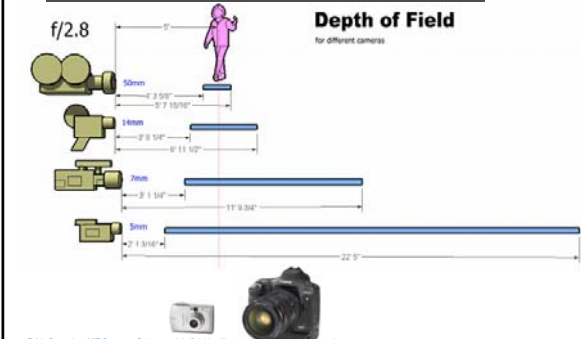

Fred Durand — MIT Computer Science and Artificial Intelligence Laboratory - fred@mit.edu

Sensor size

- <http://www.mediachance.com/dvdlab/dof/index.htm>

f/2.8

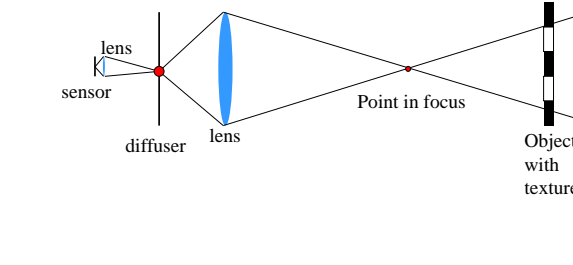

Depth of Field
for different camera

Fred Durand — MIT Computer Science and Artificial Intelligence Laboratory - fred@mit.edu

The coolest depth of field solution

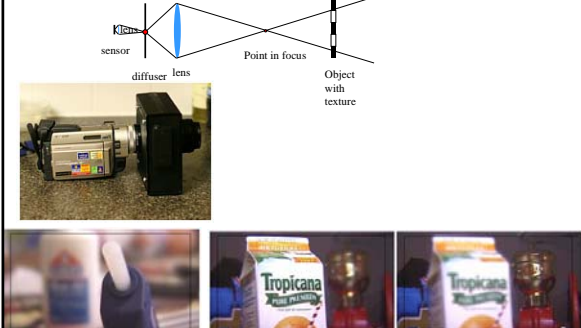

- <http://www.mediachance.com/dvdlab/dof/index.htm>
- Use two optical systems

Fred Durand — MIT Computer Science and Artificial Intelligence Laboratory - fred@mit.edu

The coolest depth of field solution

Photoshop

- Using layers:
- One sharp layer, one blurry layer (using Gaussian blur)
- Layer mask selects focus

Input (sharp layer) Blurred layer

Mask of blurry layer Result

Frédéric Durand — MIT Computer Science and Artificial Intelligence Laboratory, fréd@mit.edu

Photoshop

- Problem: halo around edges

Frédéric Durand — MIT Computer Science and Artificial Intelligence Laboratory, fréd@mit.edu

Photoshop lens blur

- Reverse-engineered algorithm: average over circle
- Size of circle depends on pseudo depth
- Discard pixels that are too much closer

Input Depth map (painted manually)

Frédéric Durand — MIT Computer Science and Artificial Intelligence Laboratory, fréd@mit.edu

Photoshop lens blur

- Filter>Blur>Lens blur

Input Depth map (painted manually)

Result

Tilt-shift lens

- Advanced control on Perspective
 - In particular for architecture
- Advanced control on plane of focus
 - Does not need to be parallel to film

Frédéric Durand — MIT Computer Science and Artificial Intelligence Laboratory, fréd@mit.edu

Architectural perspective

- Problem: converging verticals
- Normal since we look upwards
- But disconcerting

Frédéric Durand — MIT Computer Science and Artificial Intelligence Laboratory, fréd@mit.edu

Solution: crop a wider image

- Take a very wide angle
- Crop the upper part

Wide-angle image looking upward
Notice the converging verticals

Image with wider field of view (sort of)
The viewing direction is horizontal, the verticals are parallel.
When we crop, we get what we wanted!

Snapshot-*Perspective* Speed, aperture-Filter-Lighting-Processing & Print-Make up-Retouching

Solution: crop a wider image

- Take a very wide angle
- Crop the upper part
- This is what shifting does

Shift direction
Lens center
Scene
Projector
Sensor

Snapshot-*Perspective* Speed, aperture-Filter-Lighting-Processing & Print-Make up-Retouching

Architectural perspective

- Solution: view-camera
- Lens shifted with respect to film

Gandolfi

Snapshot-*Perspective* Speed, aperture-Filter-Lighting-Processing & Print-Make up-Retouching

Architectural perspective

Snapshot-*Perspective* Speed, aperture-Filter-Lighting-Processing & Print-Make up-Retouching

Digital perspective correction

- Photoshop, distort

Snapshot-*Perspective* Speed, aperture-Filter-Lighting-Processing & Print-Make up-Retouching

Digital perspective correction

- Photoshop, distort
- Can be done traditionally

Snapshot-*Perspective* Speed, aperture-Filter-Lighting-Processing & Print-Make up-Retouching

Shift: control plane of focus

sensor Lens aperture Focus plane

sensor Lens aperture Focus plane

MOUNTAIN LIGHT
GALEN & BARBARA ROWELL

Gallery

- Useful for landscape to get depth of field from foreground to infinity

Summer dawn beneath Mount Humphreys, Eastern Sierra (California, 2001)

AA1145 © Galen Rowell • Unlimited Edition

Fredo Durand — MIT Computer Science and Artificial Intelligence Laboratory. fredod@mit.edu

Soft focus

- Everything is blurry
- Rays do not converge
- Some people like it for portrait

With soft focus lens

Fredo Durand — MIT Computer Science and Artificial Intelligence Laboratory. fredod@mit.edu

Assignment

- Guess the function (slide 12)
- Take a high-dynamic range picture.
 - Get HDRShop
 - Calibrate the camera response curve (you can share the curve)
 - Use the bracketing mode on the camera to take a sequence of 3 pictures
 - Assemble a high-dynamic-range image using HDRShop
