CTSS BULLETIN #1

The following changes in the Compatible Time-Sharing System will be effective on December 12, 1963:

1. When at command level a line consisting of only a carriage return is ignored, rather than typing "NOT A COMMAND, TRY AGAIN".

2. Whenever CTSS types, "READY" it will be followed by two carriage returns so that each command will be set off by a blank line.

3. Both modules on the disk will be used. Files will be written alternately on the modules.

4. The teletype output buffers have been doubled in size. This should improve the response time of users in some situations.
