CTSS BULLETIN #35

DYNAMO Command

The command DYNAMO α will process the file α MADTRN in the same manner as the standard DYNAMO except that:

a. the model is not listed;

b. there are only 9 columns in which one may print;

c. the graph is 60 rather than 100 characters high;

d. the identification card may contain any information;

e. a continuation card, rather than having the same card number as the card it continues, will have a different number;

f. no reruns are permitted.

For further information about the standard DYNAMO, see DYNAMO User's Manual, second edition, by Alexander L. Pugh III.
