Identification

td_readbcd
T. P. Skinner

(Note that the following is an Abstract, which should be replaced by a full description at a later time.)

Function of Entry:

This routine will read one bcd record by calling the tape dcm in the tape daemon. It then converts the bcd data into Standard Multics ASCII.

Calling Sequence for Entry:

```
call td_readbcd(ioname, p, n, error);
```

Declaration of Arguments:

```
dc1 ioname char(32),  
    p ptr  
    n fixed bin(17),  
    error fixed;
```

Description of Arguments:

ioname - is the name of the tape drive desired
usually "read".

p - is pointer to data space for converted data.

n - number of characters read

error - 0 (no error)
2 (tape error)
