CTSS BULLETIN #7

## CTSS Library

1. ## RDFLX

   If the input line was longer than 84 characters (including
   the carriage return) RDFLX would cause a protection mode
   violation. RDFLX has been modified so that the protection
   mode violation does not occur and the input line is trun-
   cated after the 84th character. A future version of RDFLX
   will allow input lines longer than 84 characters.

2. ## Subroutinized Entries to CTSS

   The library now contains subroutines for the following
   CTSS entries:

   TSSFIL

   USRFIL

   GETCØM

   CØMFIL

   CHNCØM

   SETCLS

   SETCLC

   GETCLC

   GETCLS

   These subroutines allow calls to the supervisor of the
   form:

   TSX  $GETCØM,4       rather than,        TSX  GETCØM,4

   arguments                                arguments

                                            ...

                                            ...

                                   GETCØM TIA  =HGETCØM
