NAMES (memo) is an alphabetical TYPSET file in my problem number T263
3492 which is presently permitted to M1416 ∗ and T193. Each typset
line normally lists the NAME, EXTENSION, ROOM, GROUP, PROBNO and PROGNO
of users of the MAC system.

The file is designed for two purposes: 1) to output by RUNOFF the
Project MAC alphabetical telephone list in such a way that only NAME,
EXTENSION and ROOM appear on the hard copy; and 2) to select--by
TYPSET change instructions--various sets of GROUP, PROBNO and PROGNO
information helpful in monitoring use of the system and in administering
the project.

In general, a NAME is repeated if there is more than one GROUP or PROBNO
for any person. Some devices appear at the beginning of some typset lines
to prevent their being printed in the RUNOFF of the telephone directory:

1)   .∗   to indicate other line(s) with the
                                same NAME precede this line

2)   .?   to indicate currently I have some
                                question about this line of information

3)   ._   to indicate a line with only
                                PROBNO and PROGNO

Other devices within the typset line are to help in interpreting any
selection of information:

4)   (indicates no known problem number

5)   )   indicates no known programmer number

6)   +   after programmer number indicates
                                there is another problem number
                                registered to this programmer--print
                                the next line for it

7)   (PROBNO tab PROGNO)   indicates the problem number registered
                                to another name but this person some-
                                times acts for the registered user

The first line of the file describes the tab stop settings. I have attached
a copy of this line and some examples to illustrate the devices in the file.

Suggestions and assistance are most welcome. Call extension 5854. I will
keep a hard copy of the latest revision of the total file, as well as off-
line versions with NAME alphabetically, and PROBLEM NUMBER and PROGRAMMER
NUMBER sequentially.
