

MASSACHUSETTS INSTITUTE OF TECHNOLOGY
INFORMATION PROCESSING SERVICES CENTER
CAMBRIDGE, MASSACHUSETTS 02139

April 10, 1968

To: All CTSS Users
From: Michael V. Solomita
Subject: Telephone Extensions for Dataphones, Teletypes,
1050's, and 2741's.

Attached you will find a copy of telephone extensions to use for calling the dataphones at both the PROJECT M.A.C. and Information Processing Services Center computers and also the telephone extensions for the sixty-one teletypes, seventy-one 1050's, and eighty-one 2741's.

Because of the difference of the transmission rate between teletypes and the 1050's or 2741's, the programmers should be careful when calling the computer. There is a telephone extension to use when calling from a teletype and also a telephone extension to use when calling from a 1050 or 2741. If a wrong extension is used the computer will be unable to distinguish the characters coming in.

The installation of a few of the teletypes, 1050's and 2741's have not been completed as shown. Within three weeks, all the equipment should be in their locations.

If your console or dataphone needs service, call M.I.T. extension 4128. The person answering the call will record all the necessary information concerning the trouble and then notify the appropriate serviceman. The record of the trouble is kept until the serviceman calls back to report the cause of the trouble and the time the repair was completed.

A recorder message device has been installed at both the Information Processing Services Center and Project MAC. This equipment will be used by the Operations Staff to record the daily schedule of CTSS including test sessions, time system up, time system down, etc. When a crash occurs during CTSS and the system will be down longer than 10 minutes, the operator will record a message with an estimate of when the system will be in operation and also the suspected trouble with the system.

To call the recorded message from your IBM 1050, IBM 2741 or teletype dial 300 for Project MAC or 301 for the Information Processing Services Center. You will then hear the message through the earphone on the IBM 1050 or IBM 2741 headset or through the speaker on the teletype.

To call the computer from a console:

Dial 7 to call the MAC computer from a teletype

Dial 8 to call the MAC computer from an IBM 1050 or IBM 2741

Dial 9 to call the IPS Center computer from a teletype

Dial 0 to call the IPS Center computer from an IBM 1050 or
IBM 2741

To call the MAC Computer from the Bell Telephone TWX network, Dial 710-320-0800 or 710-320-0801. (Please note that the teletype being used must be equipped with Inverted frequency mode)

To call the IPS Center from the Bell Telephone TWX network, Dial 710-320-0802 or 710-320-0803. (Please note that the teletype being used must be equipped with the Inverted frequency mode)

Call M.I.T. Ext. 4128 for repair service.

Dial 300 for MAC or 301 for the IPS Center for the daily schedule of CTSS.
