CTSS BULLETIN #9

Foreground Library

Subject: New Entries

1. There are now subroutinized entries to the supervisor for the following calls:

TSX	\$GETLØC,4	Returns a specified
PZE	LØC	location from core A.
SLW	WØRD	
CAL	WØRD	Sets a specified location
TSX	\$SETLØC,4	in core A. (Accessible only
PZE	LØC	for M1416 users).
TSX	\$.ERASE,4	Deletes file FILNAM from
PZE	FILNAM	user's directory. The
(+PZE	ERRØR)	tracks are not made available
		for new writing until the
		next system loading.

2. SYPAR. (System parameters)

Returns information similar to that printed by the SD command.

Calling sequence:

PARAM = SYPAR. (code)	in MAD
TSX \$SYPAR,4	in FAP
PZE =(code)	
STØ PARAM	

where the value of "code" specifies the requested parameter:

0	Nothing
1	Last common location not used
2	Common length
3	First location loaded
4	Program length
5	System name
6 to 9	Reserved
10 to 32767	Location in core A
