CTSS BULLETIN #10

Disk Editor Control Cards

There is an error in the description (Programmer's Guide, p. 53, CC208) of the master record card for a disk input by the disk control card EDIT. The clause: "the third word contains in the decrement the last address used by the program" should read: "the third word contains in the decrement the first address not used by the program."

CTSS Test Sessions

At various times of the day when CTSS operation is not scheduled, a test version of CTSS may be operating for the purpose of debugging. The contents of the disk are not saved after these test sessions.

Before the next scheduled CTSS period the disk will normally be reloaded from the dump tapes written after the last scheduled CTSS period.
