## CTSS BULLETIN #25

Effective Monday, May 18, 1964 the calling sequence to the A core subroutine "CØMFIL" has been changed to:

CAL =N
TSX CØMFIL,4
PZE BUSY
RMT
CØMFIL TIA =HCØMFIL
RMT

where BUSY is a location in the user's program which will be transferred to if common file N is being used. The supervisor will not print a comment at this time but will return the problem number and the programmer number of the user currently using the common file, in the logical AC and MQ respectively.

The CTSS commands CØMFIL, CØPY, and UPDATE have been modified to work with the new CØMFIL subroutine.
