Identification

Errata, BD.7.03
R. M. Graham, N. Adleman

p.6 The three instructions now beginning with eapap arglist
     and ending with stpbp sp|20 should read

```
        eapap        lp|out

        stpap        sp|20

        eapap        arglist
```

That is, the instructions have been reordered, and the
bp references changed to ap references.

p.6 The call macro at label rtnerror should read:

```
rtnerror:        call        <mxerror>|[return]
```
