Identification

td\_read7  
T. P. Skinner

(Note that the following is an Abstract, which should be replaced by a full description at a later time.)

## Function of Entry:

To read a 7punch formatted tape file and convert it to data. td\_read7\$one will read only the first record of the file. This routine calls the tape dcm.

## Calling Sequence for Entry:

```
call td_read7(ioname,p,count,error);  
call td_read7$one(ioname,p,count,error);
```

## Declaration of Arguments:

```
dc1 ioname char(32),  
    p ptr,  
    (count,  
    error) fixed bin(17);
```

## Description of Arguments:

ioname - name of tape drive.  
p - pointer to data space for converted data.  
count - word count of file read.  
error - 0 (no error)  
 2 (bad tape or format)  
 3 (checksum or sequence error)
