Identification

Initializer
D.E.Joel, G.E.

Purpose

The Initializer is a 635 activity which performs the 635
initializing work necessary for the assembly and simulation
system. The initializer opens the common error file and writes
the name of the file as the first record. It opens and
writes the name of the file to which the simulator may write
the 645 core dump.

File Description

The initializer reads control cards (4 word BCD) from the
file IN. The control cards have the following format.

Word 0   Type indicator in the BCD
form 00000t

t defines the task the
Initializer is to perform.
Presently, t=1 is the only
recognized type.

For t=1

Word 1 and   The 12 character name which
word 2   is to be written as the first
logical record on the file
defined in word 3.

Word 3   The file code, left justified
of the file to be opened and
identified.
