Subject: Responsibility for Multics Assurance

Date: October 29, 1970

-----

Effective immediately Mr. Roger Roach is being given increased responsibility and the delegated authority for all areas of Multics Assurance. Roger's past experience and his performance in his current assignment make him more than qualified to assume the role of Multics Assurance Team Leader.

Roger's responsibilities will now include not only the existing control of hardcore and softcore testing and installation, crash analysis and service hardware configuration, but also the testing and installation of commands and other day-to-day aspects of running the Multics service.

Roger will obviously need help, even more so than in the past. This support will continue to come from Systems Assurance personnel who have been involved in the Multics service; Peter Bos, David Jordan, Jayne Keller, Arlene Scherer, Terone Seymore and Judy Spall. In addition, Roger will be working more closely with and depending heavily on Multics development personnel from Project MAC, Honeywell, and the IPC.
