Mr. Robert Scott, Director
Information Processing Services
Room 39-565

Dear Bob:

Here is a chronology of the Project MAC/ARPANET interaction, as best as we can determine from old memos:

- January 19, 1971 Multics and the Dynamic Modeling PDP-10 at Project MAC exchanged bits via the ARPANET. No protocols were yet embedded in either system.
- August, 1971 Dynamic Modeling PDP-10 at MAC first appeared up as a serving host (TELNET protocol only)
- September 24, 1971 Multics came up as a serving host. (TELNET protocol only)
- March 8, 1972 A.I. Lab PDP-10 on net as a serving host.

As of January, 1972, use of Multics via the net was restricted by access control lists. We do not have immediately available any record of the access control list at that time, but if a Multics dump tape from that period is available, it may be possible to reconstruct it.

Enclosed is a copy of a BBN report indicating the status of each host on the net at that time.

Sincerely yours,

Jerome H. Saltzer
Associate Professor
Head, Computer Systems Research Division

NETWORK HOST STATUS

This RFC reports on the status of most Network Hosts from January 17 to January 28.

Several Hosts are currently excluded from the daily testing. These Hosts fall into two categories:

- 1) Hosts which are not expected to be functioning on the Network as servers (available for use from other sites) on a regular basis for at least two weeks. Included here are:

<u>Network Address</u>	<u>Site</u>	<u>Computer</u>
133	BBN	PDP-10 (B)
13	Case	PDP-10
15	Ames/(Paoli)	ILLIAC/(B6500)

- 2) Hosts which are currently intended to be users only. Included here are the Terminal IMPs, which are presently in the Network (AMES, MITRE, NBS and BBN*). This category also includes the Network Control Center computer (Network Address 5) which is used solely for gathering statistics from the Network. Finally, included among these Hosts are the following:

<u>Network Address</u>	<u>Site</u>	<u>Computer</u>
7	Rand	IBM-360/65
73	Harvard	PDP-1
12	Illinois	PDP-11
19	NBS	PDP-11

NOTE: During this interval both the UTAH PDP-10 and the RAND PDP-10 became Network servers.

The tables on the next two pages summarize the Host status for this period.

*The BBN Terminal IMP (Network Address 158) is a prototype and as such is frequently not connected to the Network, but being used to refine and debug the Terminal IMP programs.

NETWORK ADDRESS	SITE	COMPUTER	DATE AND TIME (EASTERN)									
1	UCLA (NMC)	SIGMA-7	1/17 1800	1/18 1730	1/19 1000	1/20 1500	1/21 1730	1/24 1430	1/25 1630	1/26 1730	1/27 1300	1/28 1530
65	UCLA (CCN)	IBM-360/91	#H	0	#D	0	0	0	0	0	0	T
2	SRI (NIC)	PDP-10	0	0	#D	0	0	0	0	0	0	0
66	SRI (AI)	PDP-10	D	D	D	D	D	D	D	D	D	D
3	UCSB	IBM-360/75	0	0	0	D	0	0	0	D	0	0
4	UTAH	PDP-10	T	T	#T	0	0	0	0	0	0	0
69	BBN (10X-A)	PDP-10	0	0	D	0	D	0	D	0	0	0
6	MIT (Multics)	H-645	0	T	0	D	0	R	0	D	0	D
70	MIT (DM)	PDP-10	D	D	0	0	D	0	D	T	0	H
71	RAND	PDP-10	D	D	0	D	D	T	D	D	0	D
8	SDC	IBM-360/155	#D	#D	#D	#D	#D	#D	#D	#D	#D	#D
9	HARVARD	PDP-10	0	#D	0	#D	#D	#R	#R	0	0	0
10	LINCOLN LABS	IBM-360/67	D	H	T	H	H	H	D	H	T	H
74	LINCOLN LABS	TX2	#D	#T	#D	R	0	0	0	0	0	T
11	STANFORD	PDP-10	D	D	D	D	D	D	D	D	D	D
14	CARNEGIE	PDP-10	H	H	H	H	H	D	H	H	D	H
16	AMES	IBM-360/67	D	D	D	D	D	D	D	D	D	D

where

D = Dead (Destination Host either dead or inaccessible [due to network partitioning or local IMP failure] from the BBN Terminal IMP.)

H = 1/2 Open (Destination Host opened a connection but then either immediately closed it, or did not respond any further.)

O = Open (Destination Host opened a connection and was accessible to users.)

R = Refused (Destination Host returned a CLS to the initial RFC.)

T = Timed out (Destination Host did not complete the ICP and open a connection within 60 seconds.)

*The only service currently offered by the UCLA IBM-360/91 is a Network Job Service (NETRJS), however, the BBN Terminal IMP is not equipped to test NETRJS. We are assuming that initial connection to the NETRJS logger indicates that NETRJS is also functioning.

#These sites advertise that they may not have their system available at these times.
