Subject: Data Modems - Model 113A

This is to advise you that, the Bell System is now offering 2 additional features which were not available in the original Model 113A data modem or set. These new features are:

1. Illumination of the "Data" button whenever the set is off-hook, and is in either "data" or "test" mode.
2. Automatic station disconnect under control of the associated terminal equipment, which just recognize and react to a disconnect code from the distant end (CPU).

The cost of the new set is \$12.00 per month vs \$10.00 for the older set. The cost of installing the set is \$25.00. To change from the old to the new is also \$25.00.
