Desirable Data Switch Services   6/16/69

1. Message unit counters (or equivalent) on

                        each console line

                        each computer port line

2. Automatic reporting to computer owner of monthly counter readings

3. Ability to redirect which group of lines the single digit "7" hunts
    over, from the computer room. (Duplex; twin tail
    problem).   Or;   twin tails on 103E data sets

4   First digit selects computer complex
    2nd digit selects port speed hunt group.

5. Somehow need more flexibility to handle short period high traffic
    usage (e.g.,   100 students on 645 for 2 wks, thereafter only 50
    users.)   (Perhaps portable data sets?)

6.   12-key touch tone dials for remote computer inputs

7. Non-Bell System Data modems.

8.   Ability to dial a 4 digit (Terminal) number and get
     one certain line which is in the 8-level hunt group.
     (Need to test a specific data set on computer port)

9. Ability to skip dialing from some consoles. Push a button, data switch hunts for an available input port on the only computer that console may talk to. (If it can save any money.)
