Subject: Data Sets

In his letter of April 2nd, Prof. Saltzer refers to the absence of monitor lights on the interface leads to the Tuck Electronics data sets. Tuck Electronics can provide indicator lamps, which can be switched to monitor any one data set interface. The one-time cost for Tuck Electronics to do so is \$12.50 per data set.

There are currently 168 functioning Tuck Electronic data sets. Of these, 98 are at MULTICS.

Do you wish to provide these interface lead indicator lamps?
