Mr. R. G. Mills, Assistant Director  
Project MAC  
Massachusetts Institute of Technology  
545 Technology Square  
Cambridge, Massachusetts 02139

Dear Dick:

Regarding Stan Dunten's memorandum, the sequence prefix "+" is wrong; it should be prefix ". The address answerback mechanism is triggered only when the terminal is in receive text mode; when a user is typing, the mode is transmit text and the mechanism does not respond.

Print suppression is accomplished by energizing a "non-print" magnet. This inhibits the printing mechanism while allowing the user to finger the keys.

Sincerely yours,

Peter Robohm  
Marketing Representative
