MEMORANDUM

To: Initial Distribution List of MPM

From: Jerome H. Saltzer

Subject: Multics Programmers' Manual

        If you receive this memo, you are on the list of persons
who received an early draft copy of the Multics Programmers' Manual.
The early draft manual went through a series of updates, the last one
being on September 15, 1969. When the manual was finally upgraded
for wide distribution, there were so many changes that it was not
appropriate to issue a massive update to cover them and fill in the
missing sections for the initial distribution list. The September
26, 1969, version of the manual should be considered a complete
replacement for the earlier version, which is probably best discarded.
The September 26th version is available at the Project MAC Document
Room for members of Project MAC, and at the IPC User Registration
Office for general users.
