Multics Operations Interface ~~with the~~ (3 Consoles in or near the machine room.)

1. Detachable I/O equipment operator.
   District process operating ~~things~~ which communicates with the detachable I/O operator via a M37 or 1050 console just as any other user. This operator mounts and dismounts Disk Packs, tapes, etc.

~~2. Background Printer operator~~
~~District process which communicates with the Background Printer operator via a M37 or 1050 console or any other user. this operator~~

2. Multics operator
   District Process using a M37 or 1050 or any other process. Communicates ē operator in charge (might even be I/O operator) to answer questions about system operation, communicate trouble messages to operator, allow operator to direct reconfiguration or system down purposes.

3. Multics log.
   A Model 37 console under control of a process which records events of monitoring items (logins, logouts, system changes, etc.) It may record all operator ~~conversations~~ communications with Multics also. A copy of this log is also stored in a file, to be saved as long as is deemed suitable.
