BCPL/PAL improvements for performance

1.   BCPLEPL.EPL   currently uses - smm writearounds
                                    - varying string
     fix: remove writearounds, move to PL/I

2.   PAL List command calls minishell for oreo; it could make its own
     more cheaply since student file directory is small.

3.   bcplgl (library routine) upgrade

4.   bind   bcplgl, ulib, belib1, and bcplepl

5.   Move .bstack to the combined link section (student use only)

6.   (Long range) improve bcpl code generation.
