

W. McIlroy
for next

Feb. 28, 1969

propose subjects would like to hear

- various people using

1. (most sig.) what can be done to make 1-level store, preserve data when crash
2. unlinking: new proc. now
- 3x (minor annoyance): persistence of KST entries; ^{eg.} remove a file, rename access
4. performance prospects
- 5x only way to op. now is to shutdown freq. ; price ~ 1/2 hr. because warm boot ~ 12 min!
- 6x problems of cross-talk betw files being created + being used
text + link, ~~same~~ ^{start using}, someone happens to read in a new version
- 7x "old files never die" - often "scrogged" - hard to ensure a compatible set of programs
8. will ~~an~~ unlinking sol. invalidate dynamic linking
9. (McIlroy only) ~~the~~ when protected ring crossing (w/ any valid), ~~will~~ how expressive will rings be?
10. Small computers BCL, ~~the~~, EPL BSA use a lot of machine time
