

Comments for Doug Kern

1. ASCII: LF or NL
CR

EBCDIC LF
NL

better to have ASCII LF have ^{new} ~~same~~ card code as than EBCDIC LF maybe.

2. { 12-0-8-2
} 12-11-8-2
~ 11-0 } are slipped into EBCDIC alphabetic collating
sequence. Should this be avoided?
(use ~~12-11-0-8-2~~ etc.)
or 12-11-0 (exception)
or 12-0-8-1

3. | is vertical bar ' acute accent better, = ' apostrophe in 2/7

4. [→ 4 + !] lead to keypad confusion unless IBM notable 5/360
why not | → !
! → |

or interchange \ + | in ASCII?

! - | collation is violation of ISO?
