Identification

Set Alarm Procedure
Harlow Frick

Purpose

Set_alarm is a master mode procedure called by the clock co-ordinator in order to load the alarm clock register of the primary system clock.

Calling Sequence

The calling sequence is:

```
call master_mode_ut$set_alarm(time);
```

Where time is an aligned 72 bit string which will be loaded into the alarm clock register of the system clock currently being used as the Multics primary system clock.
