Identification

rsw_
N. I. Morris

(Note that the following is an Abstract, which should
be replaced by a full description at a later time.)

Function of Entry:

    Reads switches on Processor.
    Does not wait for them to be set.

Calling Sequence for Entry:

    switches = rsw_;

Declaration of Arguments:

    dcl (switches, rsw_ ext entry) bit (36);

Description of Arguments:

    Upon return from rsw_, switches will contain the
    setting of the processor data switches.

    N.B.:   switches must be in aligned bit string
               (i.e., not a member of a packed structure).
