More fg1rx graphics foo

Real quick now, much of which applies to the gx745:

- There are slightly more packages that above needed... maybe 5 more? 10 more?
- The canonical ATI on debian site: <http://www.stanchina.net/~flavio/debian/fg1rx-installer.html>
- Get the latest source from ATI here: <http://ati.amd.com/support/drivers/linux/linux-radeon.html>
- Apply the patch for 2.6.20 from here: <http://darcs.frugalware.org/repos/frugalware-current/source/x11-extra/fg1rx/fg1rx-2.6.20.patch>

There are helpful instructions on the extraction and patching here: <http://www.stanchina.net/~flavio/debian/fg1rx-kernel-module-problem.html>

**Temporary Storage**

A circular diagram with 'Host' and 'Hosts' written inside, and 'INDUSTRY' written below it. Arrows indicate relationships between the elements. Below the diagram, the words 'Salary challenge' are written in cursive.

**Cognitive Support**

A hand-drawn diagram consisting of a central rectangular box. Three arrows point towards it from the left, top-left, and top-right. Two arrows point away from it to the left and bottom-right. The diagram is drawn on a white surface.

**Reminding**

A Sony Ericsson mobile phone with a screen showing a video recording notification. The screen displays 'Video 8:30am', '02:01 pm', and '14-05-07'. There are icons for 'Calls' and 'More' at the bottom of the screen.

**Unusual Information Types**

How to find circular dependencies:

copy paste the failed build command g++ into a different shell by putting in parentheses, then precede the -o with -E and replace the object file with some foo file. then run and look at output.

```
(cd ../../.. &&
/usr/dev_tools/current/bin/g++ -E -o
/tmp/foo -MMD -MP -g3 -Wlong-long
-Wpointer-arith -Wall -Wno-endif-labels
-Wno-
-mar
-offs
-D E
../1
tmales/build/datalayer -I
```

# Needs?

## 1. too much effort to write it down/put it in

"If it takes three clicks to get it down, it's easier to e-mail [to myself]."

## 2. no tool for it / it doesn't fit

"I wanted to assign dates to *notes*, but [it] would only allow dates on *tasks*."  
"Where else would I keep my { guitar tabs / poetry }?"

## 3. too hard to organize

"It's too much work to decide which section it should go in –sometimes things don't fit in just one place. It's hard to decide what to do."

## 4. visibility and availability

"If it's not in my face, I'll forget about it."  
"I need it with me at all times, so I have no choice."

# Needs?

1. too much effort to write it down/put it in

"If it takes three clicks to get it down, it's easier to e-mail [to myself]."

2. no tool for it / it doesn't fit

"I wanted to assign dates to *notes*, but [it] would only allow dates on *tasks*."  
"Where else would I keep my { guitar tabs / poetry }?"

3. too hard to organize

"It's too much work to decide which section it should go in – sometimes things don't fit in"

What about lightweight  
note-taking tools  
and snippet-keepers?

4. visibility and availability

"I need it with me at all times, so I have no choice."

Directions to 4106 Clagett from the North  
 Take the New Jersey Turnpike south all the way to the end.  
 It turns into 95 in Delaware. Continue south.  
 Go over the Delaware memorial bridge.  
 In Maryland, continue on 95 - going through a big tunnel before Baltimore.  
 When you're starting to get close to us, you'll see signs for Laurel,  
 then later Beltsville.  
 Eventually 95 hits the beltway (495).  
 At that point you will also see signs for Rt1 South, College Park.  
 Follow signs to Rt 1 South, Exit 25/27  
 At one point the highway will split-- you should stay to the right and  
 take Rt 1 South.  
 Then it will turn right onto College Park.  
 Once you get to College Park, you will see signs for the University of  
 Maryland. Turn right onto the University of Maryland.  
 A lot of people will be driving on the University of Maryland.  
 The University of Maryland is on the right side of the road.  
 Some people will be driving on the University of Maryland.  
 At a traffic light, turn right onto the University of Maryland.  
 Take the first right onto the University of Maryland.  
 Take the first right onto the University of Maryland.  
 Take the first right onto the University of Maryland.  
 We're in the University of Maryland.  
 (Note: If you are driving on the University of Maryland,  
 far on Rt 1 South, you will see signs for the University of  
 Maryland. Turn right onto the University of Maryland.  
 our house is on the University of Maryland.)

  - A few years ago Elahi, a new media artist, was stopped by the FBI in an airport after 9/11 and interviewed as a suspect. Of what he was never told. But the interrogation bugged him. In the effort to prove himself innocent he flooded the agencies with all the data about himself - his travels, his phone records, pictures of every meal, all his expenses. He kept dumping this huge database about himself on them till they besieged him to stop. But he kept documenting his own life in minute detail, and making it "public" as an art project. There's press about it.

## list.it -- before you forget it!

list.it, the Latitudinal Information Scrap Trapper that Indexes Things - is a small, simple note-keeping tool for solving a big, complex task -- helping you manage the tons of little information bits you need to keep track of each day. list.it does this by focusing on *speed* and *simplicity*. We have gotten rid of everything except a way to get things in and out *quickly*, so that you can get things out of your head and somewhere you can access easily any time.

**Contribute to science!** - When you sign up for list.it sync service, you can volunteer to allow us to examine your notes during our note-taking studies. Check out [results from our previous studies](#) and [study details and terms](#).

**NEW! - List.it for Hackers** - Interested in helping us improve list.it, or using list.it in your own projects? Join our [List-it Google Code project](#) where we check in our latest code. If you are interested in using list.it for ethnographic PIM research also let us know.

**NEW! - List.it Discussion Group** - Have questions or suggestions? Insights about your own PIM practice you want to share? Check out our [List-it Google Group](#) and let us know your thoughts.

Questions or comments about the project? Check out our [discussion forum](#) and/or contact us at [listit \(at\) csail.mit.edu](mailto:listit@csail.mit.edu)

### about it

- news
- frequently asked questions
- about us

# List.it (demo)

For studying note-taking in situ

Open source! (MIT License)

Instrumented for logging

# List.it field study (Nov 2008)

42 participants

10 days

“as you see fit”

exit survey

results

## results:

number of non-exercise notes taken by person (42 participants)  
min: 2, median : 11, max: 146 (overall: 853)

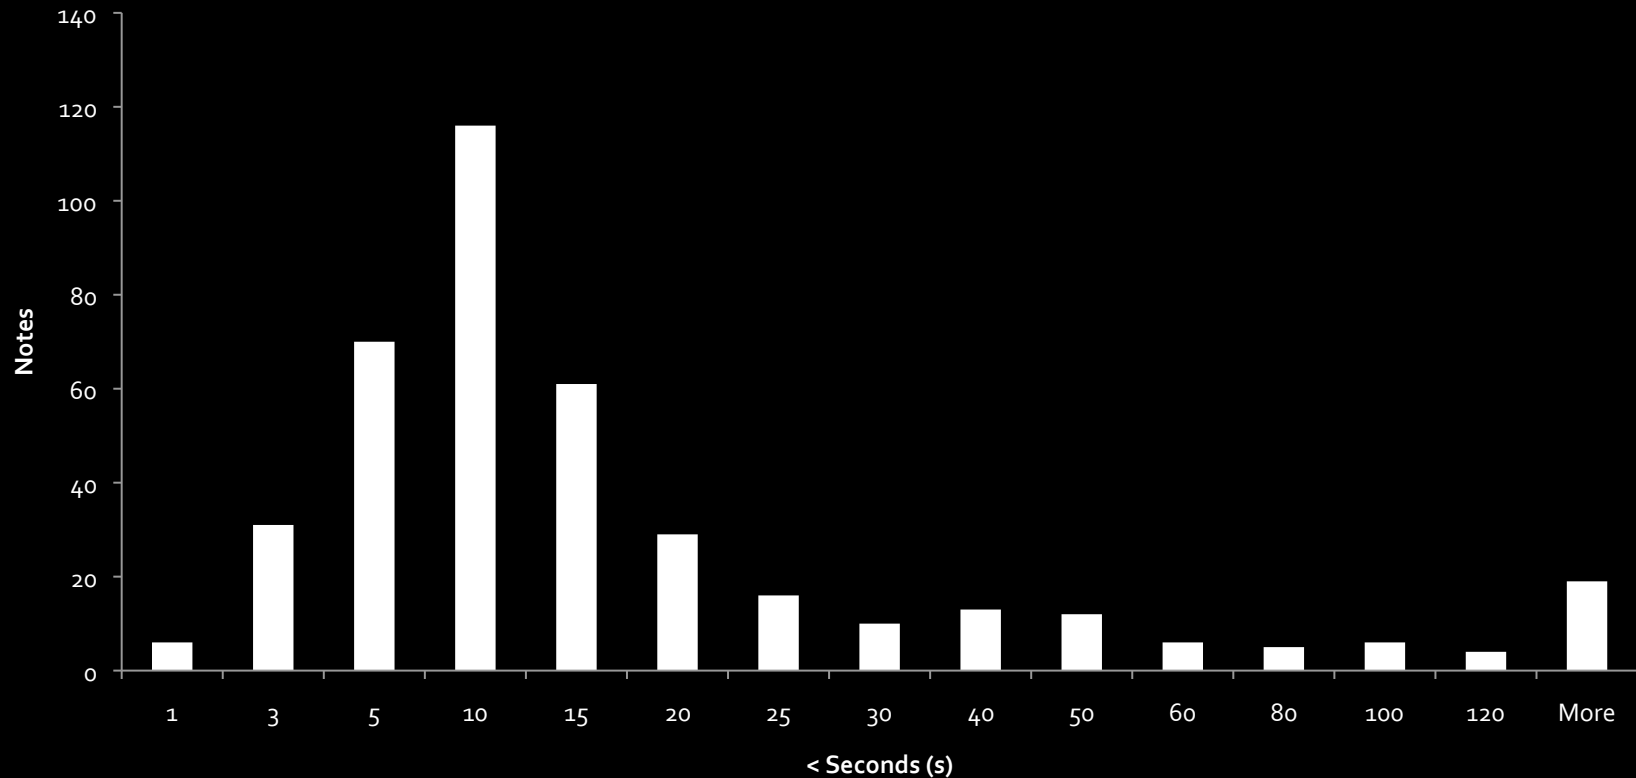

across participants: ~ 35 new notes per day

# notes were **created** quickly and tersely

30% of notes were captured in under 5 seconds  
50% in under 10 seconds  
95% in under 2 minutes

time to create a new note

# note **edits** were infrequent, quick and minor

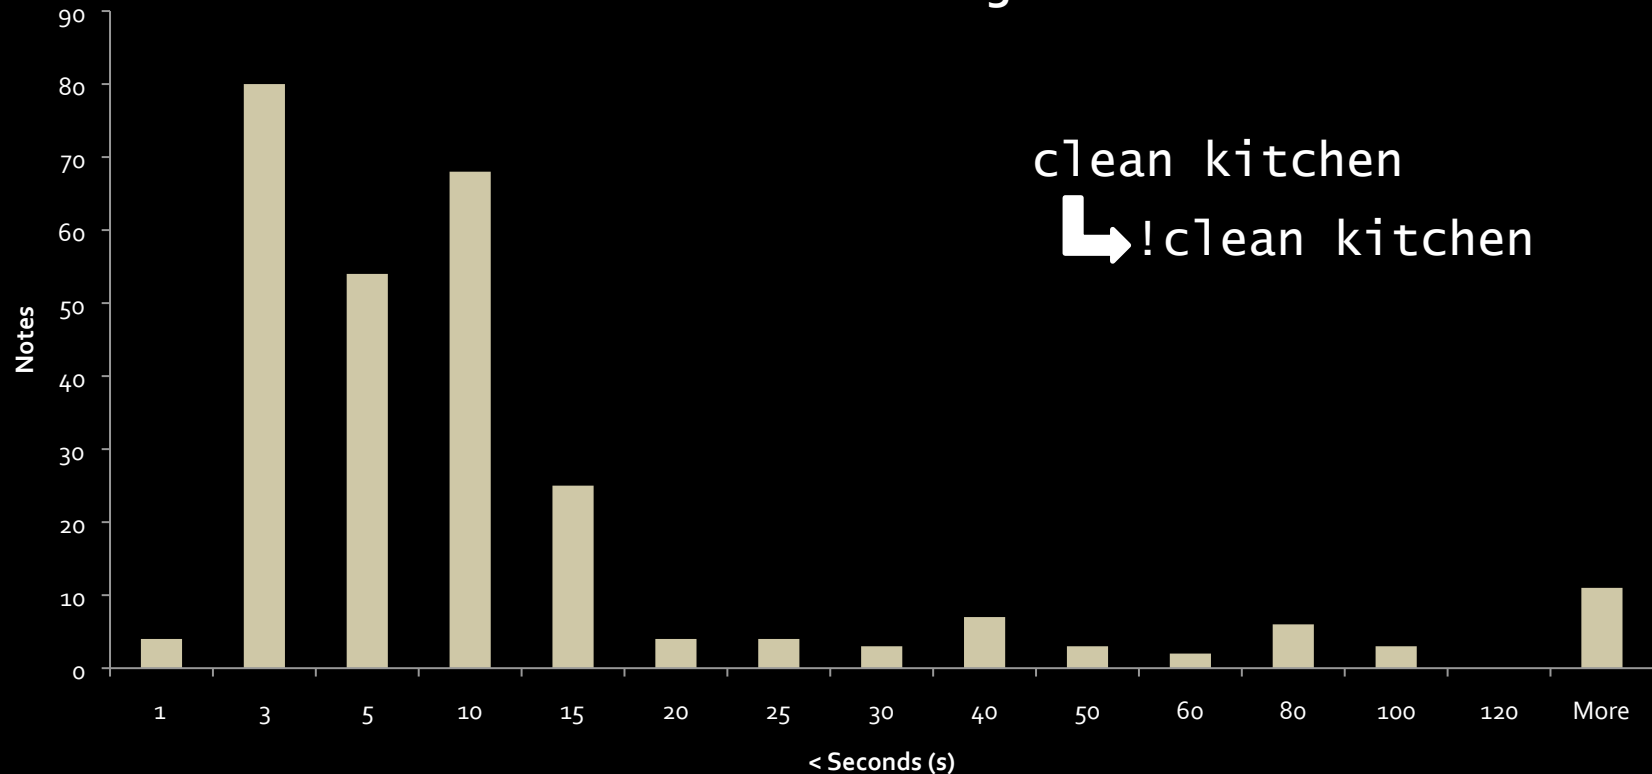

75% of notes were never edited

19% were edited exactly once

39% of edited notes were edited <5 mins after creation

40% of edits were < 2 character edits

### time to edit an existing note

# notes were **extremely short**

median : 29 characters, 7 words

43% were 5 words or fewer

# words per note

# why so short?

**scho1o** -> "I was leveling my warlock in World of Warcraft [...] part of it involved running the instance Scholomance ( "Scholo" for short)."

**jhsieh** -> "I need to contact this person soon"

# notes were rarely deleted

28% of notes were deleted

notes deleted *sooner* after creation were more likely to be *shorter*

$t(165)=2.26, p<0.05$

deletion strategies:

(7/42=17%) deleted *over half* the notes they created;

most participants deleted *fewer* ( $\mu=21\%, \sigma=4.6\%$ )

Evidence of the “to keep or not to keep” dilemma [Jones, 2004]

And “deletion paradox” [Bergman 2003] ?

# information types naturally ambiguous

participants asked to categorize up to 15 non-prompted notes  
however, empirically notes often combined traditional PIM types  
to-do, calendar item, contact information, ...

Sept 4 12-1pm CCI meeting NE25-746

coders (3/3): "calendar item"  
user: "to-do"

# search is infrequent and targeted

Most (36/42) participants searched fewer than 10 times

Two participants used search heavily,  
76% of their searches were repeats:  
“today” and “todo”

22% of searches yielded exactly 1 note (search-as-navigation)

34% of notes were re-found at least once  
(by self-report)

# metadata added to aid re-finding

write python calculator for 20.110? to do classes

search logs:

```
to do
today
9.18
@do
!read by wed
!!pay rent
```

# people used the design affordances of list.it

"List.it seemed most useful for small lists and brief notes [...] due mostly to its simplicity. Overall, I think I'll continue to use it [...] for jotting down quick notes and reminders."

Why in list.it and not elsewhere?

quick capture (35%), browser integration (18%), visibility (13%)

Without list.it, where would you have put it?

- *I wouldn't have saved it, I don't have anything else to quickly take a note like that.*
- *I probably would not have taken a note at all, and I probably would have forgotten to do it.*
- *[I would have written it] probably on a piece of paper that would then get lost*

list.it struck a chord

(as of april 7<sup>th</sup>):

11059 registered users

1904 users consented to be studied

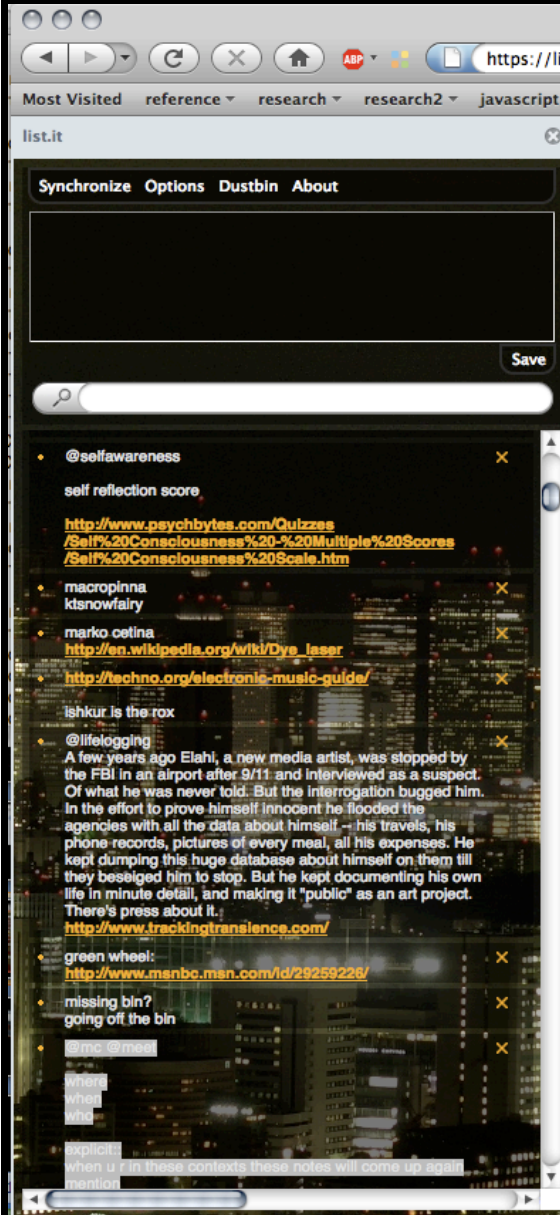

48,214 notes uploaded

52 list.it “groupies”

(PIM researchers, fans, hobbyists)

First open personal note corpus for PIM research

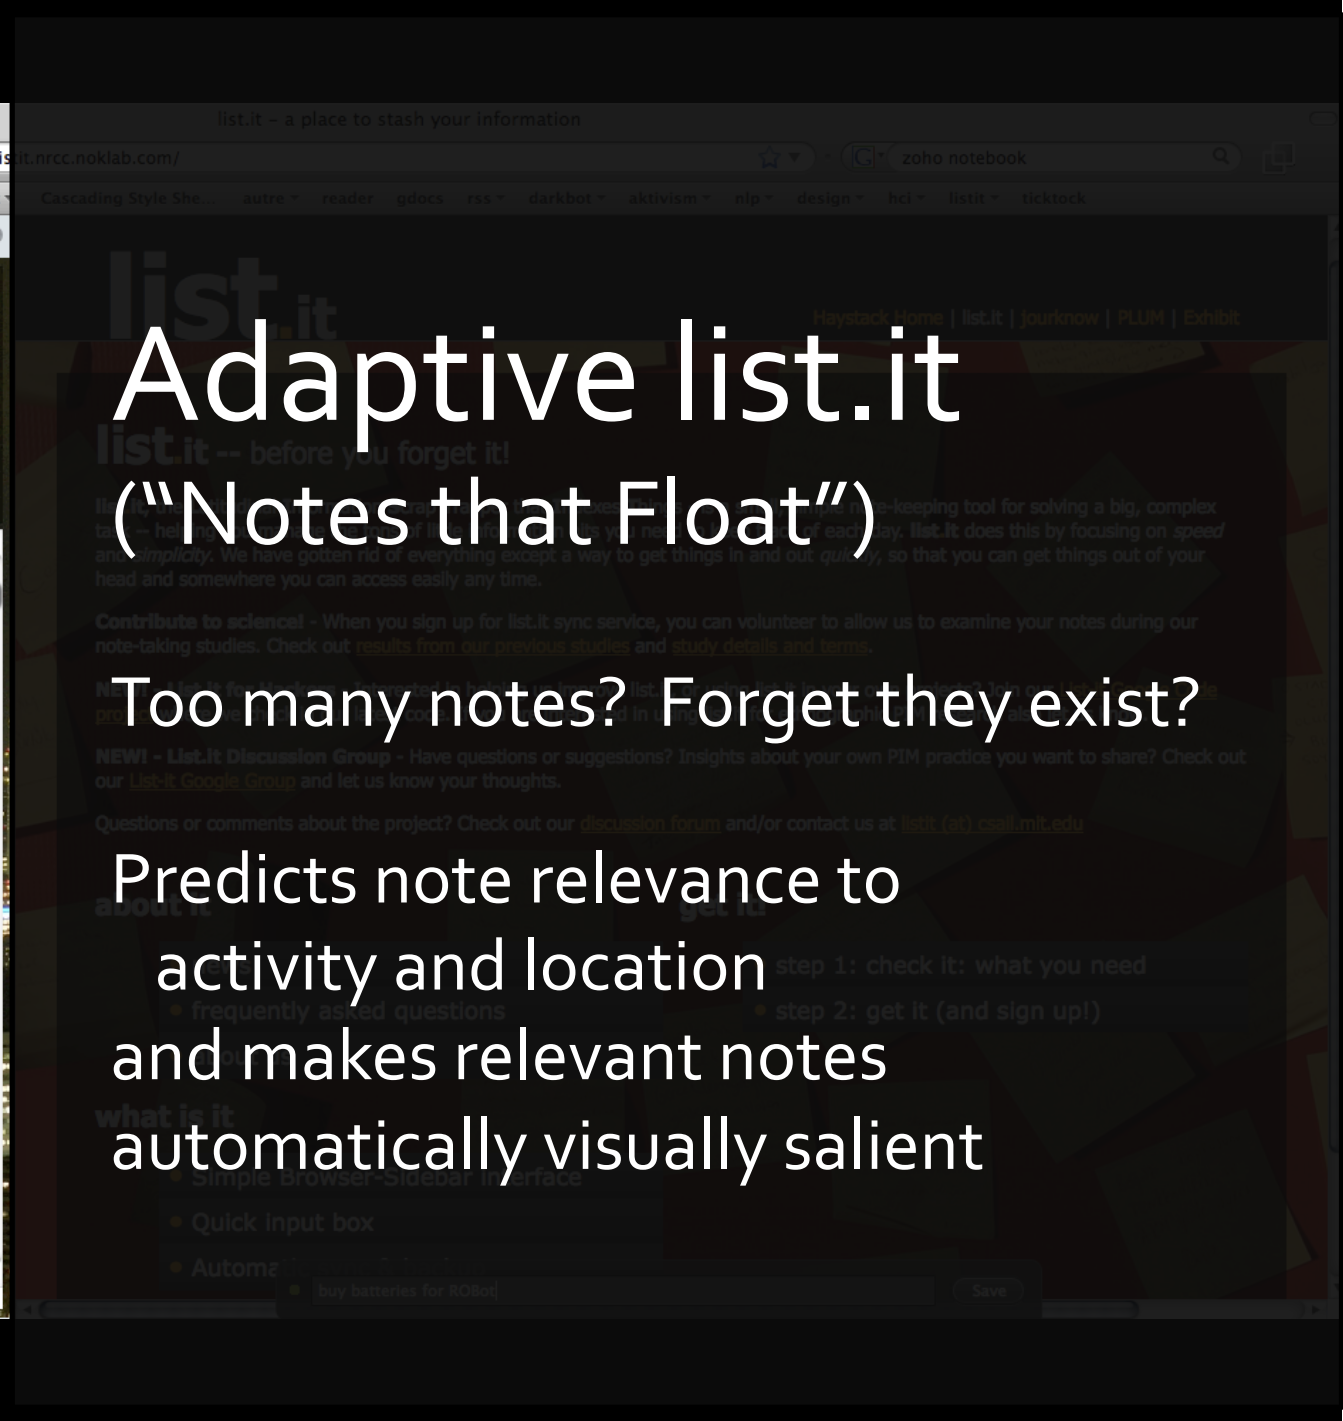

# Adaptive list.it ("Notes that Float")

Too many notes? Forget they exist?

Predicts note relevance to  
activity and location  
and makes relevant notes  
automatically visually salient
