About This Manual vii
Customer Support xi

Chapter 1 Introduction 1

1.1 CMMD Programming Models 1

1.2 Introducing the CM-5 System 2
1.2.1 Partitions 2
1.2.2 Operating System: CMOST 3
1.2.3 CM-5 Vector Units 3

1.3 A Note to Users from Other Systems 4

Chapter 2 Developing a CMMD Program 7

2.1 Basic Components of a CMMD Program 7

2.2 Hostless Programs 8
2.2.1 Computation and Communication 8
2.2.2 Termination 9

2.3 Host/Node Programs 9
2.3.1 Computation and Communication 10
2.3.2 Termination 10

2.4 Hostless versus Host/Node Programming 11

2.5 Include Files 11

2.6 I/O Modes 12
2.6.1 Special Issues with Fortran I/O 13
CMMD I/O Mode Restrictions 13
Don’t Mix F77 I/O and CM Fortran I/O 15

2.7 Sample Programs 15

Chapter 3 Compiling and Linking a CMMD Program 17

3.1 Compiling Hostless C, C++, and C* Programs 17
3.1.1 Compilers 17
C and C++ Programs 17
C* Programs 18
3.1.2 Execution Model for Vector Units 18

3.2 Compiling Hostless Fortran 77 and CM Fortran Programs 19
3.2.1 Compilers 19
Fortran 77 Programs 19
CM Fortran Programs 20
3.2.2 Execution Model for Vector Units 21

3.3 Compiling Host/Node Programs 21
3.3.1 Fortran 77−CM Fortran Host/Node Programs 22
3.3.2 C-C* Host/Node Programs 22
3.3.3 Global/Local CM Fortran and Global/Local C* 23

3.4 Linking with `cmmd-ld` 23

Chapter 4 Executing Programs 25

4.1 Gaining Access 25

4.2 Checking System Status 27

4.3 Executing a Program 29

4.4 Timing a Program 29
4.4.1 Using CMOST Timers 31

4.5 Commands and Tools 31

Chapter 5 Debugging and Error Handling 33

5.1 Debugging 33

5.2 Error Handling 34
5.2.1 Default Error Handling 35
5.2.2 Customized Error Handling 35

5.3 CMMD Safety Routines 35

5.4 When Your Program Is Terminated 36
5.4.1 Using `printf` 36
5.4.2 The Errors File 36
5.4.3 Core Files 37
5.4.4 CMTSD Files 37

5.5 Fortran Tracebacks: A Warning about Synchronization 37

Appendix A Non-RTS Parallel Memory Allocation **39**
A.1 The Parallel Stack and Parallel Heap 39
A.2 VU Regions 39
A.3 Expanding the Stack or Heap 40
A.4 Translating Stack and Heap Addresses 42
A.5 Using `pmalloc` to Allocate Memory 43
