 SUBJECT: Installation of MSS 30.5 & 30.5a

I. SYSTEM CHANGE LOG

MCR MODIFICATIONS FOR MSS 30.5, 30.5a

- 2406 Hardcore part of PL/1 installation. (30.5a)
- 2460 Fixes a bug in lpi_interrupt which was causing some special interrupts from tape mounts, rewinds, etc. to be lost.
- 2413 Fixes msf_manager_\$adjust not to call hcs_\$terminate_file on the MSF directory when asked to terminate the MSF. Terminating directories is no longer an accepted practice.
- 2419 Changes the command table used by system_control_ to assume that the reconfiguration commands do not read from the terminal.
- 2430 Gives TDCM a cleanup handler; thus, all tape DIM's will detach tapes when released during attachment.
- 2453 Fixes a bug in Disk DIM error reporting.
- 2431 Makes RCP send a wakeup to a process when force-detaching a resource. Thus allowing an operator to deny tape mounts.

II. SEGMENT CHANGE LOG

SEGMENT NAME	BOUND SEGMENT
alloc_.alm	R bound_sss_wired_ (30.5a)
any_to_any_.alm	R bound_sss_wired_ (30.5a)
disk_control.pl1	R bound_page_control
loi_interrupt.pl1	R bound_lom_wired
msf_manager_.pl1	R bound_fsm_
pl1_operators_.mexp	R bound_sss_wired_ (30.5a)

Multics Project internal documentation. Not to be reproduced or distributed outside the Multics Project.
