 SUBJECT: Installation of MSS 30.13

I. SYSTEM CHANGE LOG

MCR MODIFICATIONS FOR MSS 30-13

- 2631 Updates disk under light load. A check is made, under light loads, as to whether much information exists only in core; if it does, the pages are written. This should eliminate the information lost when the system crashes under light loads (this is the hardcore portion of the installation only).
- 2585 Allows the star convention to be used on 64K directories that contain links. Backup can now dump these directories.
- 2588 Makes RCP detach printout volume name with "ERRORS:" message on the operator's console.
- 3649 Fix to correct_qused to reset quota correctly.
- 3650 fix_quota_used will no longer "correct" quota when a segment is offline.

II. SEGMENT CHANGE LOG

SEGMENT NAME	BOUND SEGMENT
correct_qused.pl1	R bound_system_faults
get_aste.pl1	R bound_system_faults
hardcore.header	R -
hphcs_.mexp	R -
pc.pl1	R bound_page_control
quotam.pl1	R bound_page_control
rcp_detach_.pl1	R bound_rcp_
ssf_seg.cds	A -
vtoc_attributes.pl1	R bound_system_faults

Multics Project internal documentation. Not to be reproduced or distributed outside the Multics Project.

II. SEGMENT CHANGE LOG (continued)

BIND SEGMENTS

bound_page_control.bind	R
bound_system_faults.bind	R

INCLUDE SEGMENTS

ssf.incl.pl1	R
