I. SYSTEM CHANGE LOG

MCR MODIFICATIONS FOR MSS 32.4b

3046 Improve default error message for linkage_error, particularly in the case when the link to be snapped is to a larger external variable than what is already allocated. This also fixes a resetread following a quit bug.

Sample new message:

Error: Linkage error by >udd>proj>pers>foo
 Referencing common block or external variable x (100 words)
 External variable or common block was previously allocated
 with a smaller size.
 Original allocation (2 words) was by >udd>proj>pers>bar.
 Type "help external_storage.gi" for more information.

II. SEGMENT CHANGE LOG

SEGMENT NAME	BOUND SEGMENT
default_error_handler_.pll	R bound_error_handlers_
error_table_.alm	R -
linkage_error_.pll	R bound_error_handlers_
