SUBJECT: Installation of MSS 33.2

I.   SYSTEM CHANGE LOG

MCR MODIFICATIONS FOR MSS 33-2

2573 Message documentation is added to tty_init_ and load_fnp_,
and an incorrect error message is fixed in tty_init_.

2892 The following improvements are made to the volume reloader:
1. A more exact error message during volume log recovery.
2. The damaged switch will be set if a tape error occurs
during reload.
3. More exact error file name.
4. Improved operator interface when duplicate control files
are found.
5. Bug fix for cold boot environment during pathname
determination.
6. Improved syncronization error messages.
7. Improved volume selection algorithm.
8. A cleanup handler for aborted rdisk attachments.

2750 Enables setting and display of volume dumper
date-time-dumped and incremental and complete dump control
switches.

2893 The following bugs are fixed in the volume dumper:
1. Caused an incorrect copy of the file map in vtoce to be
dumped in certain cases.
2. Caused -no_object mode to eat up AST entries.
A bug in the add name function of the volume retriever is
fixed. A sub_error_ handler is added to system_startup_ for
rdisk_ problems.
