I. SYSTEM CHANGE LOG

MCR MODIFICATIONS FOR MSS 33-8

- 3139 Fixes `tc_init`'s calling sequence to terminate `$tseg` to use the proper number of arguments.
- 3221 Adds the entry point `decimal_date_time_ to date_time_`, for the use of the new absentee and I/O daemon facility.
- 2914 The hardcore portion of the new printer software is installed.
- 3055 The following bugs in `backup_load` are fixed:
1. Redundant messages about incorrect access when lacking modify access on the parent.
 2. Incorrect error message about bad syntax in pathname when backup is unable to force append access on the parent.
- 3055A Adds the entry point `backup_load_` to the old backup system.
- 3208 The following bugs in volume backup are fixed:
1. Handles link retrieval correctly.
 2. Better messages if the logical volume is offline during dumping.
 3. Treats damaged segments as not there during retrieval.
 4. Improves handling of page read error during dumping.

Multics Project internal documentation. Not to be reproduced or distributed outside the Multics Project.
