DATE: September 28, 1973

SUBJECT: On Line Installation Changes

The following is a list of changes to the standard service system,
maintenance tools, author maintained and installation maintained
libraries for the week beginning September 24, 1973.

     HOW TO READ THIS LISTING:

Item 1   may be the date the segment was updated.

Item 2   may be the system library in which the segment is maintained.

                 TOOLS   is the maintenance tools library

                 SSS   is the standard service system

                 AM   is the author maintained library
                           (Installation maintained software is
                                     currently kept in AM also)

                 LANG   is the languages library.

Item 3   is the name of the object segment or component being updated.

Item 4   is the action which was taken:
                 added
                 replaced
                 deleted
                 moved

NOTE: The library name and date will appear only before the names of
                 bound segments or single unbound object segments, but will not
                 appear before the names of object components within bound
                 segments. Therefore, if no date or library name appears, you
                 may assume that the name refers to an object component.
                 Just trace down to the next date and library name to learn the
                 name of the object segment itself.

                 Note that changing the name or the language type of a segment
                 may involve a delete of the old segment and an add of the
                 new one.

                 Note also that a notation is made when a library segment is
                 renamed at the same time that it is being replaced in the
                 libraries. This notation will appear as another line in
                 parentheses below the objectname line.
