

TO: Distribution
FROM: Roger A. Roach
DATE: December 4, 1973
SUBJECT: Summary of Multics Source Libraries

This MIB obsoletes MCB-1061.

The attached list provides a one line summary of every source segment currently installed in the system library directories (>ldd>...) as of December 2, 1973. Each segment is listed with a date and time which specifies when the source was last updated in the library archives. (Note: the online libraries were reorganized on February 17, 1973 and all dates and times were changed at that time. Therefore, the dates and times reflect the latest change only if the module was changed after that date.) In addition, the path name of the source segment is given which shows (for the online libraries) which bound segment, if any, that segment resides.

A list of the "other" (non pl1, alm, fortran or bcpl) source segments may be found at the end of this report.

This list is maintained online both as a total report and as lists for each individual library. These segments are located in >ldd>smag>source_segs and are updated weekly (roughly each Saturday at 0100).

Multics Project internal working documentation. Not to be reproduced or distributed outside the Multics Project.

Summary of the source library contents as of December 2, 1973.

Library	pl1	alm	fortran	ocol	other	total
