SUBJECT: ONLINE INSTALLATION CHANGES

The following is a list of changes to the standard service system, maintenance tools, author maintained and installation maintained libraries for the week beginning December 3, 1973.

        HOW TO READ THIS LISTING:

Item 1   may be the date the segment was updated.

Item 2   may be the system library in which the segment is maintained.

            TOOLS   is the maintenance tools library

            SSS   is the standard service system

            AM   is the author maintained library
                        (installation maintained software is
                                currently kept in AM also)

            LANG   is the languages library.

Item 3   is the name of the segment or component being updated.

Item 4   is the action which was taken:
            added   replaced
            deleted   moved

NOTE: The library name and date will appear only before the names of
            bound segments or single unbound segments, but will not
            appear before the names of object components within bound
            segments. Therefore, if no date or library name appears,
            you may assume that the name refers to an object component.
            Just trace down to the next date and library name to learn the
            name of the object segment itself.

            Note that a notation is made when a library segment is
            renamed at the same time that it is being replaced in the
            libraries. This notation will appear as another line in
            parentheses below the objectname line.

            Note also that help files are recorded as a one-line change
            as if they were object segments.
