SUBJECT: Installation of 21.7

The hardcore system, MSS 21.7, was installed at 09:00 on Friday, December 21, 1973. This system deleted the obsolete TDSM interface; included more MTS-500 support code: put call limiters on hardcore gates; implemented changes for 256k segments in the file system and its interface module; added the MDS remote computer device type in the TTY DIM and fixed bugs which involved the segments pss, page_fault, trace, active_all_rings_data, init_sys_var and admin_gate_. The system libraries were updated at 15:44 on Wednesday, December 26, 1973.

I. System Change Log

<u>Change #</u>	<u>Change</u>
1217	Delete the obsolete Interface, TDSM.
1218	Change default tty channel of initializer to otw_ and default dim to oc_. Correct bug in conversion of tty channel number picked up from OPTY configuration card.
1219	Allow fsm to work with files having a max_length of 64k or 256k which will allow present MSF's to be manipulated for a time after 256k segs are installed. Fix a bug in MSF termination.
1220	Install modules preparatory to 256k segments.
1221	Add new device type to TTY DIM for Monawk remote computer and also ring 0 implementation of read_status order call.

Multics Project Internal documentation. Not to be reproduced or distributed outside the Multics Project.

I. System Change Log (continued)

<u>Change #</u>	<u>Change</u>
1222	Add notify timeout; add notify system_trace; add notify check to make sure it works and add page_fault meters.
1223	Add more changes to support MTS-500.
1224	Place call limiters on hardcore gates and fix a bug in signaller which doesn't restore EIS registers correctly.
1225	Fix a bug in trace which computed the length of the line to be printed on a PRT300 incorrectly.
1226	Correct an editing error in admin_gate_.

II. Segment Change Log

III. Bound Segment Change Log

<u>Bound Segment</u>	<u>Change</u>
bound_error_active	Replaced terminate_proc
bound_file_system	Replaced make_sea makesstack
bound_fsim_	Replaced file file_util make_msf_ msf_manager_
bound_init_1	Replaced initialize_faults
bound_init_2	Replaced int1_branches
bound_lo_init	Replaced tape_Init tty_Init
bound_lom_active	Replaced tdom
bound_lom_wired	Replaced tdom_status trace
bound_page_control	Replaced page_fault
bound_system_faults	Replaced sea_fault

III. Bound Segment Change Log (continued)

Bound SegmentChange

bound_tdsm_

Deleted tdsm_
tdsm_util_
tdsm_xmt_
tdsm_xtach_

bound_temp_?

Replaced init_hardcore_gates
init_sys_var

IV. Header Change Log

Change #1217 removed the entire entry for bound_tdsm_ ; #1223 changed the cur_length of tape_data to 2500 and #1224 added an entry for restart_fault, changed signallers access from write to privileged and its call ringback from 7 to 0.
