Subject: Installation of Bos 1.31

The Bos system, 1.31, was updated at 12:15 PM on Friday, January 4, 1974. Change # 0005 (MCR 080), which replaced the include files readt.incl.alm and error.incl.alm and recompiled loaddm, setup, and util added the capability to handle Bos Operators' console timeouts. Change # 0006 (MCR 062), which added the source segment bosldr and the object segment bosldr.raw, added the 5 card Bos loader to the Bos libraries. Change # 0007, which replaced print.alm, corrected an earlier oversight in the installation of print by changing the default tape drive number from 0 to 1.
