SUBJECT: ONLINE INSTALLATION CHANGES

The following is a list of changes to the standard service system,
maintenance tools, author maintained and installation maintained
libraries for the week beginning June 10, 1974.

HOW TO READ THIS LISTING:

Each modification is preceded by the MCR number covering
it (if there is one), and a brief explanation of the
change.

This information is followed by the name of the object
segment, help file, include file, or bound segment
(or group of the above) involved in the modification.

Also given is the date and time of installation,
and the name of the system library to which the change
was made.

For bound segments, a list of the components follows,
as well as the action which was taken with regard to
each component.

An explanation does not accompany the listing of a
segment which was "de-installed", or removed because
of some problem, but the original installation infor-
mation may be considered inoperative.

*****
MCR's 399, 466: The I/O coordinator was replaced so that the
"time" parameter in io_daemon parms can be set to a reasonable
value, and so that exec-coms for starting up the daemon should
work properly.

06/13/74   1430.7   bound_iodc_ replaced in TOOLS

       replaced: iodc_
                      iodc_overseer_
                      free_oldest_request_

*****
MCR 542: The old version of formline_ was temporarily added to
bound_debug_ in order to allow the installation of the new
formline_ in the hardcore (debug does not yet work with new
formline_).

06/13/74   1441.9   bound_debug_ replaced in SSS

       added: dummy_ioa_tv
                      dummy_ioa_
                      dummy_rest_of_ioa_
                      old_formline_

*****

MCR 500: The delete_ subroutine in bound_fscom1_ was replaced to
allow correct handling of the ACL used to initiate a segment
that is to be deleted.

06/13/74   1450.8   bound_fscom1_ replaced in SSS

       replaced: delete_

*****
MCR 515: The message coordinator was recompiled with EIS for
greater efficiency. Most components were changed.

06/13/74   1504.0   bound_oprcons_ replaced in TOOLS

       replaced: message_coordr_
                      mrdim_
                      mrd_util_
                      sys_log_
                      write_log_
                      dump_mrt
                      dump_vct
                      dump_syscon_mseg
                      dump_devq
                      restart_chn
                      attcon_
                      mc_list
                      mrd_tester

*****
MCR 502: Bug number 278 was fixed in the full command processor,
specifically that process_input_string_ will no longer print an

2.

erroneous error message while processing an &if line.

06/13/74   1543.3   bound_full_cp_ replaced In SSS

        replaced: process_input_string_

+++++

06/13/74   1554.7   bound_iodc_ de-installed from TOOLS

            (previously installed 06/13/74   1430.7)
