MULTICS INSTALLATION BULLETIN

TO: MIB DISTRIBUTION
FROM: Arlene Scherer
DATE: December 13, 1974
SUBJECT: ONLINE INSTALLATION CHANGES

The following is a list of changes to the standard service system, tools, network, unbundled, author maintained and installation maintained libraries for the week beginning December 9, 1974.

HOW TO READ THIS LISTING:

Each modification is preceded by the MCR number covering it (if there is one), and a brief explanation of the change.

This information is followed by the name of the object segment, help file, include file, or bound segment (or group of the above) involved in the modification.

Also given is the date and time of installation, and the name of the system library to which the change was made.

For bound segments, a list of the components follows, as well as the action which was taken with regard to each component.

An explanation does not accompany the listing of a segment which was "de-installed", or removed because of some problem, but the original installation information may be considered inoperative.

Multics Project internal working documentation. Not to be reproduced or distributed outside the Multics Project.

MCR's 425, 699,700,775,791: The new acl commands module, set_acl was added to bound_access_commands_, while the old module, acl_commands was deleted. (425, 775). Command ms_create was added to bound_access_commands_ to provide commands for message segment and mailbox manipulation. Segment bound_mseg_commands_ was deleted, having been replaced by ms_create (699, 791). New procedure find_common_acl_names_ was added to do access name matching, while old procedure match_acl_names_ was deleted (700). Please use check_info_segs to get the list of fourteen info segments which were replaced or added with this installation. Include segment extended_access_data.incl.pl1 was added.
