Subject: Installation of Salvager 2.31

The Salvager system 2.31 was updated at 9:30 AM on Monday, August 18, 1975. In addition to bringing the Salvager up to date with Hardcore system 26.2, several minor changes were made to the offline salvager. Change # 0009 (MCR 1205), which replaced salvager.pl1 in bound_offline_salvager, fixed the salvager to flush its syserr buffer after salvaging has completed. Change # 0010 (MCR 1192), which replaced init_salv_fsdcts.pl1 in bound_offline_salvager, added the capability to expand the FSDCT size at cold boot, as well as warm boot, time. In addition to the above changes, the salvager edit_header was modified to include a new data segment: reused_addr_seg, for use in keeping track of reused addresses as they are encountered.
