SUBJECT: Installation of BOS 2.04

I.   SYSTEM CHANGE LOG

MCR   MODIFICATIONS FOR BOS 2.04

1805 Delete all pre-init code from MCS modules to simplify builds
     with new MCS binder.

1887 Add new FNP card to CONFIG deck in preparation to deleting
     D355 card.

1959 Change BOS BLAST command to send one message to the 355
     instead of sending individual ones for each configured
     communications channel.

1960 Modify BOS id355 to look for status in word 6 of mailbox
     instead of word 1, and to ignore status sent by the 355 when
     initialization program is entered.

1968 Improve RUNCOM SKIP facility to allow selective execution of
     lines in the RUNCOM file.

2006 Change BOS to print its version ID.

2007 Make the BOS bootloading mechanism more reliable by
     eliminating spurious lockup faults which occurred when
     booting.

2028 Modify BOS to run with the NSA IOM which will support 32
     additional payload channels, allowing a total of 56.

none Add patches to disk firmware to fix two bugs: 1. EOF, Good
     track deleted status 2. Power off status (control store
     error on EDAC)
