

## Multics Task Report

MTR-108

To: Distribution  
From: Tom H. VanVleck  
Date: 11/11/75  
Subject: Report on Design Discussion, MTB-215

Only a few people attended the review of sub\_err\_.

It was suggested that the documentation for sub\_err\_ be expanded to describe when and how to use it. The "f" (fatal) flag was renamed "s" (stop).

One attendee objected to the idea that the subroutine might cause cu\_\$cl to be called. He was unable to explain why this was bad though.

Next step is to submit MCR incorporating improved documentation.
