SUBJECT: System Admin Status

Answering service 7.4 is ready for submission. It implements a new destroy process protocol which will fix bug 163.

About ten other MCR's are pending, including bug fixes to accounting, new billing programs, removal of >tools from default search rules, and the change of the Initializer's access ID to "Initializer.SysDaemon.z"

One bug in the message coordinator remains. It shows up on console switching. The locking bug which caused the system to loop has been fixed.

Some work has been done on the printer DIM, to provide separator bars, like those on the batch system.

A carton of material has been sent to Telefunken; we have no indication of how well they are doing.

Peter Haber is picking up the mail/send_message replacement project. It has been decided to put the message segment for a user in his home directory, in the interest of simplicity.

An MTB on "dial" is being written. The actual code involved will be negligible.
