MEMORANDUM

To: Multics Administrative Distribution  
From: Leo J. Ryan *L. J. Ryan*  
Subject: Distribution of H-6180 Output

The IPC Courier Service will bring output from the H-6180 Multics System to specific locations in Tech Square. Time schedules and drop off points will be set up prior to discontinuing Multics service on the 645. There will be a notice published in the IPC Bulletin when this service is to start.

Projects that wish to have output delivered to Tech Square must use the Header Control argument of the I/O Daemon to designate the address. Those projects, and addresses which the courier will recognize will be as follows:

CP-575TS	(Cambridge Project)
MAC-545TS	(Project Mac)
CISL-575TS	(Honeywell)

The address must appear on the top line of the I/O Daemon's output. Output which is identified by project name, user name will be held at the dispatch output counter of Building 39. Output will be held for five days after the date of printing.
