Subject: FORUM minutes for February 20, 1973

| | | | |
|------------|------------|------------|--------------|
| Attendees: | WJ Burner | RE Hoffman | LJ Ryan |
| | CT Clingen | ED Kleinow | JR Steinberg |
| | JW Gintell | JR Ohlin | SH Webber |
| | RM Gross | RA Roach | |

A. H6180 Hardware Status

CP11-B Serial #01 Processor has an EPAQ problem; software has been patched to avoid it.

BSS-A Another half-million words installed, bringing total to one-million words; ran 750K-words on Service last Friday without incident.

DS181 Can't be accessed by IOM-A; one minor problem on DSU181 Drive # \emptyset .

DS190 All aligned this morning.

B. H6180 Software Status

No significant change from last week. Today, Gintell expects to publish an MSB which gives the schedule of programmer moves.

C. Communications, Consoles, Terminals

Gross reported that the short comm-cables should be delivered today. Gintell reported a deterioration of communication capability: four of the MIT/150-baud lines and three of the HIS/300-baud lines are not working, apparently because of a misunderstanding on the part of the phone company.

D. Tech. Square

PRT300-A alignment and replacement of worn slugs have been completed. Ammons is "close" to isolating the op-not-complete problem on CPU-A.

FORUM - 2/20/73

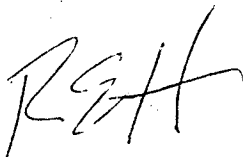

We had problems with six DSU270 belts during past week, resulting in two system crashes; two sets of belts are on emergency order.

E. Equipment

Additional CSM's for BSS-B will not be installed in 545TS, will be put into temporary storage in B39 awaiting relocation of BSS-B cabinet.

F. Miscellaneous

H6180 output listings will be delivered twice-a-day to CISL in 575TS by the courier, starting immediately. FED Headquarters has been moved from 545TS to B39. Gintell to review all published material for adequacy and completeness with regard to running 645 programs on H6180. Meeting adjourned at 10:15 am.
