Identification

td_readbcd
T. P. Skinner

(Note that the following is an Abstract, which should be replaced by a full description at a later time.)

Function of Entry:

This routine will read one bcd record by calling the tape dcm in the tape daemon. It then converts the bcd data into Standard Multics ASCII.

Calling Sequence for Entry:

call td_readbcd(ioname, p, n, error);

Declaration of Arguments:

dcl ioname char(32),
p ptr
n fixed bin(17),
error fixed;

Description of Arguments:

ioname - is the name of the tape drive desired usually "read".

p - is pointer to data space for converted data.

n - number of characters read

error - 0 (no error)
        2 (tape error)
